Sams Teach Yourself SQL I 10 Minutes
4th Edition

Setup instructions for PostgreSQL

1. Download and install PostgreSQL and pgAdmin III
2. Right-click on Databases and select New Database
3. Set name to tysql, you can leave all the other fields blank and create the database
4. New database will be listed, it may show a red X meaning that pgAdmin III is not connected to it, just double-click on it to connect (the red X will go away and you'll see options beneath it)
5. Once tysql is seletected, click on the "Execute arbitrary SQL" button, it has an orange magnifying glass with the word SQL in it
6. This displays the query editor
7. Make sure that the drop-down list box on the top right of the dialog box says that you care using the tysql databas
8. Copy and paste contents of Create (may see warnings about keys, ok)
9. Execute Query button (green arrow) to execute
10. Copy and paste contents if Populate
11. Test it with SELECT * FROM Customers;
